

# BUILDING ENERGY SIMULATION

*For Users of EnergyPlus, SPARK, DOE-2, BLAST, Genopt,  
Building Design Advisor, ENERGY-10 and their Derivatives*

## What's Inside ?

- 2 New Features in VisualSPARK 1.0.2
- 5 International Weather Data for EnergyPlus
- 9 Ask an EnergyPlus Expert: EnergyPlus System Types, Blinds and Slats, Cooling Coil Controls, Master Meter Reports
- 12 Fall and Winter Educational Programs from Pacific Gas & Electric
- 14 DOE-2 Puzzler: DX Units
- 15 "Adapting DOE-2 to Meet the Research Interests of the Egyptian Housing Bureau and Building Research Center"
- 20 Free IBPSA-USA Membership
- 34 New DOE-2 Consultant: Daniel A. Katzenberger, P.E., of Edina, MN

## Software .....

- 11 **BLAST News**
- 22 **Building Design Advisor 2.0**
- 13, 26 **DOE-2.1E**
  - 14 Training and Help Desk
  - 26 Software and Services
- 22 **DoeRayMe**, a New Screening Tool Application
- 20 **DrawBDL 3.0**, New and Improved!
- 23 **ENERGY-10 1.5**
  - 5, 25 **EnergyPlus 1.0.2**
    - 1 User Group Weather Data
    - 21 User Group
    - 25 Software and Services
- 21 **GenOpt 1.1.2**
- 10 Building Energy Software available from Lawrence Berkeley National Laboratory
- 36 Support Tools for **EnergyPlus** and **DOE-2** from The Deringer Group
- 2 **VisualSPARK 1.0.2**

## Departments .....

- 22 BLDG-SIM Mailing List
- 24 Meetings, Conferences, Symposia

### *Join the EnergyPlus User Group*

The developers of EnergyPlus have formed a support group to foster discussion and maintain an archive of information for program Users.  
We invite questions about program usage and suggestions for improvement to the code. Go to [groups.yahoo.com/group/EnergyPlus\\_Support/](http://groups.yahoo.com/group/EnergyPlus_Support/)

*SPARK is an equation-based simulation environment that allows you to build customized models of complex physical processes by connecting calculation objects that represent system components like walls, fans, heat exchangers, chillers, ducts, mixing boxes, controls, etc. It is aimed at the simulation of innovative and/or complex building systems that are beyond the scope of whole-building programs like DOE-2 and EnergyPlus. VisualSPARK adds a graphical user interface to SPARK to simplify use of the program.*

## VisualSPARK 1.0.2 Released!

VisualSPARK 1.0.2 may be downloaded free of charge from

<http://SimulationResearch.lbl.gov> > VisualSPARK

### New Features

#### Sparse linear solution technique

- Added sparse linear solution method based on the C library *umfpack* (<http://www.cise.ufl.edu/research/sparse/umfpack>) v3.2 by Tim Davis. This new solution method is selected by specifying the value 4 for the key `MatrixSolvingMethod` in the `problem.prp` file. It does not rely on vendor-specific BLAS routines but instead on vanilla C code, thus ensuring portability of the *SPARK* program.
- Significant gains in calculation speed by many orders of magnitude have been observed on large problems for which the Jacobian matrix is typically more than 90% sparse.

#### Automatic Jacobian refresh strategy

- Added value 0 as a possible choice for the `TrueJacobianEvalStep` key in the `problem.prp` file. The value 0 indicates that the Jacobian matrix will be refreshed automatically by the solver code whenever it is needed to ensure robust and fast convergence. The refresh strategy is based on the convergence behavior of the weighted residual norm and of the increment norm between successive iterations.
- For values larger than zero, the key `TrueJacobianEvalStep` still specifies the iteration frequency at which the Jacobian should be reevaluated.

#### Statistics log file

- At the end of the simulation, *solver* generates a log file with performance statistics about the solver operation. In particular, you can find information on:
  - the preference settings used for the simulation for each strong component;
  - the average sparsity of the Jacobian matrix and the number of times it has been refreshed; and the operation of both the linear solver and the nonlinear solver with average calculation times. This information can be used to compare the computational efficiency of solving models with different formulations or different preference settings.

#### Full affine invariant scaling scheme

- Replaced previous scaling schemes with a single scaling scheme that achieves fully affine invariant scaling in both the variable space and the residual space. This makes *solver* less sensitive to changes in the variable units and to formulations where the variables show very different orders of magnitude.
- If convergence difficulties are encountered with a particular problem, the full scaling scheme should be selected in the `problem.prp` file to improve the numerical behavior of *solver*.

## Absolute tolerance property for each problem variable

- A new variable property, ATOL, was added to the *SPARK* language on the PROBE, PORT and LINK statements in order to specify the absolute tolerance for each problem variable. The ATOL property should be set to the absolute value at which the variable in question is essentially insignificant.
- In *solver*, added support to load the ATOL property for each problem variable, thus replacing the AbsTolerance keyword previously specified in the *problem.prf* file at the component level.
- Improved the input handler to allow it to read in properties of problem variables along with the variable values at the specified time stamps. The syntax to specify the property ATOL of the variable X is the qualified name X:ATOL. The input handler can read in values for any variable properties, namely MIN, MAX, ATOL and INIT.

## Problem driver API

- The problem driver application programming interface (API) added to *VisualSPARK* 1.0.2 allows an advanced user to:
  - customize the sequence of operations to re-solve the same problem,
  - manage and solve multiple problems,
  - retrieve solution values and specify new inputs for a new simulation of the same problem, and
  - change runtime parameters (e.g., to perform sensitivity analysis).
- We have also modified the *main.cpp* file that implements the main *SPARK* driver function to use the new set of API. Comprehensive documentation on how to write such a problem driver function is available at <http://simulationresearch.lbl.gov> > VisualSPARK.

## Default preferences in *setupcpp*

- Added support for default values for the component preferences specified in a file called *default.prf* and residing in the working directory. The default values are used to populate the template preference file associated with the solution sequence generated by *setupcpp* for the problem.
- If the file exists upon calling *setupcpp*, the values in the file are used in place of the hard-coded default preference settings. If no such file exists, then *setupcpp* will generate a template file with the hard-coded default preferences for possible future modification by the user.

## Changes

### Documentation

- Merged glossary of terms between the *SPARK Reference Manual* and the *VisualSPARK Users Guide*.
- Enforced text conventions throughout the documentation to better distinguish the different elements of the *SPARK* language.

### Parser

- Discontinued usage of the keyword UPDATE\_FROM\_LINK in LINK, PORT and PROBE statements and replaced it with the keyword INPUT\_FROM\_LINK that better reflects its behavior

### Solver

#### *Improved convergence strategy*

- In order to ensure that badly-scaled systems are solved with satisfactory precision, we now force the convergence check in the non-linear solver to occur in the variable space, i.e. solely based on the increments value, after the first iteration. This represents a change from *VisualSPARK* 1.0.1 where a successful residual check carried out even after the first iteration was a sufficient condition to stop the iteration. The convergence test is stricter and more robust, especially for problems with variables with very different order of magnitudes.

#### *Variable scales based on individual absolute tolerances*

- The introduction of the ATOL property in the *SPARK* language allows to consider an individual absolute tolerance for each problem variable, as opposed to for each strong component as in *VisualSPARK* 1.0.1. The convergence check in the nonlinear solver and the computation of the cost function used with the backtracking Newton schemes have been updated to support the new absolute tolerance mechanism.

## Graphical User Interface

- Changed default wall clock settings to year 2002
- Changed title of button from "MODIFY" to "MODIFY CLASS PATH"
- Added support for new solver features in the component preferences editor
- The absolute tolerance entry has been removed from the component preferences editor because it is now specified on a variable-by variable basis.
- Added the sparse LU matrix solving method in the component preferences editor.
- Reduced scaling types to "None" and "Full" in place of the former scaling options in *VisualSPARK* 1.0.1.

## Bug Fixes

### Documentation

- Corrected typo in description of the macro links where the single quote ' used to prefix an object name in a hierarchy of objects was replaced with the single quote ` as prescribed by the *SPARK* syntax.  
`obj1'obj2'obj3~linkname`  
has been replaced with  
`obj1`obj2`obj3~linkname`
- *SPARK* documentation may now be downloaded as pdf files; right-click on links below or go to <http://SimulationResearch.lbl.gov> > VisualSPARK.  
[SPARK Reference Manual](#), [VisualSPARK Users Guide](#), [SPARK Library Functions](#), [SPARK Problem Driver API](#).

### Parser

- Fixed a bug in the `PARAMETER` keyword (did not work when there was more than one `PARAMETER` statement in one class).
- Fixed infinite loop bug caused by aliased variables. Aliased variables are created in `LINK` statements that do NOT contain `obj.port` connections.

### Setupcpp

- Write out error message showing the calling syntax if *setupcpp* is executed with no argument at the command-line instead of crashing.

### Solver

- Fixed bug in *sparksym* for the *mathomatic* symbolic solver that limited to 14 the number of variables allowed in the equation to be processed.

---

SPARK was developed by the Simulation Research Group of Lawrence Berkeley National Laboratory and by Ayres Sowell Associates, with support from the Assistant Secretary for Energy Efficiency and Renewable Energy, Office of Building Technology Programs of the U.S. Department of Energy, program manager Dru Crawley.

## EnergyPlus Version 1.0.2

To download a free copy of the program go to

[www.energyplus.gov](http://www.energyplus.gov)

### International Weather Data for EnergyPlus

One of the most common questions asked of the EnergyPlus Development Team is 'where can I get weather data for my location?' In the US and Canada, there are good-quality, free, public-domain data (TMY2 and CWeC). For other locations, it's a bit tougher. ASHRAE (TC 4.2 Weather Information) sponsored development of IWeC (International Weather for Energy Calculations) data for 227 locations in more than 70 countries outside the US and Canada. In your country, the local meteorological office often has better and more complete data than is available through the World Meteorological Organization (and in the US, the National Climatic Data Center, where ASHRAE obtained the source hourly data for the IWeC). If there wasn't enough good quality data available, there is no location in the IWeC.

Below is the list of international locations (IWeC) that will be available (again) soon from ASHRAE. We have licensed the data for EnergyPlus users at no cost. We will place the new IWeC data on our web site ([www.energyplus.gov](http://www.energyplus.gov)) as soon as it becomes available. If you have data for locations that are not listed below and would be willing to share the data with other EnergyPlus users, please contact Dru Crawley ([Drury.Crawley@ee.doe.gov](mailto:Drury.Crawley@ee.doe.gov)).

If you want to know more about weather data in EnergyPlus and how to use the WeatherConverter, go to the DocMainMenu (under Start, Programs, EnergyPlus Programs) and click on Auxiliary Programs and Developer Guides. Then click on Auxiliary Program Information. The Weather Converter is discussed beginning on page 16.

Thanks, **EnergyPlus Development Team**

*EnergyPlus is being developed by University of Illinois, CERL, and Lawrence Berkeley National Laboratory, with the assistance of the Florida Solar Energy Center, GARD Analytics, the University of Wisconsin, Oklahoma State University and others. Development of EnergyPlus is supported by the U. S. Department of Energy, Dru Crawley, Program Manager.*

## Ask An EnergyPlus Expert

### Question:

Does EnergyPlus support heating or cooling systems other than air conditioning systems? I am thinking of water systems like underfloor heating, active wall/ceiling systems and radiator systems.

### Answer:

Yes, it can do all of these. In addition to forced air systems using DX and chilled water cooling, EnergyPlus can model hot water radiators (BASEBOARD HEATER:Water:Convective), heated and cooled surfaces (LOW TEMP RADIANT SYSTEM:HYDRONIC, LOW TEMP RADIANT SYSTEM:ELECTRIC) and gas or electric radiant heaters (HIGH TEMP RADIANT SYSTEM).

### Question:

I noticed in the EnergyPlus Input/Output Reference Manual that Fig. 5 (p. 60) does not show blinds consisting of slats. Further the verbal description of slat details in the Manual is unclear.

My question, then, is this: What is the slat width and the slat separation?

### Answer:

In the field descriptions for Material:WindowBlind, the references to Fig. 5 are incorrect; they should all be references to Fig. 6, found on p. 66. Our apologies for the confusion. Also, check out the "blinds" section of the Engineering Doc Reference under "Optical Properties of Windows". There is also an example file: PurchAirWindowBlind.idf which may illustrate the use for you.

### Question:

I am having trouble getting my controls to work for a single duct VAV with reheat. My cooling coil is producing 28F discharge air and my reheat terminals are running full reheat.

### Answer:

See the VAVSingleDuctReheat.idf example in EnergyPlus\Examples\Misc to see how the cooling coil controls should be set up.

### Question:

If the building's electric consumption only depends on the lighting and the electric equipment, then where do I input the chiller and chilled water pump electric consumption to effect the building total electric consumption? If I change the nominal capacity in CHILLER:ELECTRIC, the result on total building electric consumption doesn't change at all. What is the effect of CHILLER:ELECTRIC in this building simulation?

### Answer:

To report the master meter for the entire building, including HVAC equipment, add the following to your input file: report meter, electricity:facility, hourly; (or monthly, or environment)

To see just the electric consumption of the chiller, add this:

report variable, \*, Chiller Electric Consumption, hourly;

See the Input Output Reference, pp. 530-537 for more information.

**[support@blast.bso.uiuc.edu](mailto:support@blast.bso.uiuc.edu)**

The **Building Loads Analysis and System Thermodynamics (BLAST)** program predicts energy consumption, energy system performance and cost for new or existing (pre-retrofit) buildings.

BLAST contains three major sub-programs:

- **Space Load Prediction** computes hourly space loads in a building based on weather data and user inputs detailing the building construction and operation.
- **Air Distribution System Simulation** uses the computed space loads, weather data, and user inputs.
- **Central Plant Simulation** computes monthly and annual fuel and electrical power consumption.

## Heat Balance Loads Calculator (HBLC)

The BLAST graphical interface (HBLC) is a Windows-based interactive program for producing

BLAST input files. You can download a demo version of HBLC (for MS Windows) from the BLAST web site (User manual included).

## HBLC/BLAST Training Courses

Experience with the HBLC and the BLAST family of programs has shown that new users can benefit from a session of structured training with the software. The Building Systems Laboratory offers such training courses on an as needed basis typically at our offices in Urbana, Illinois.

## WINLCCID 98

LCCID (Life Cycle Cost in Design) was developed to perform Life Cycle Cost Analyses (LCCA) for the Department of Defense and their contractors.

**To order BLAST-related products, contact the Building Systems Laboratory at the address above.**

Program Name	Order Number	Price
<b>PC BLAST</b> Includes: BLAST, HBLC, BTEXT, WIFE, CHILLER, Report Writer, Report Writer File Generator, Comfort Report program, Weather File Reporting Program, Control Profile Macros for Lotus or Symphony, and the Design Week Program. The package is on a single CD-ROM and includes soft copies of the BLAST Manual, 65 technical articles and theses related to BLAST, nearly 400 processed weather files with a browsing engine, and complete source code for BLAST, HBLC, etc. Requires an IBM PC 486/Pentium II or compatible running MS Windows 95/98/NT.	3B486E3-0898	\$1500
<b>PC BLAST Package</b> Upgrade from level 295+	4B486E3-0898	\$450
<b>WINLCCID 98:</b> executable version for 386/486/Pentium	3LCC3-0898	\$295
<b>WINLCCID 98:</b> update from WINLCCID 97	4LCC3-0898	\$195

*The last four digits of the catalog number indicate the month and year the item was released or published. This will enable you to see if you have the most recent version. All software will be shipped on 3.5" high density floppy disks unless noted otherwise.*

## PG&E Fall and Winter 2002 Programs

To register call the Pacific Energy Center (at least one week in advance) 415.973.7268 or go to [www.pge.com/pec](http://www.pge.com/pec)

### WHOLE-BUILDING PERFORMANCE

- |                    |   |
|--------------------|---|
| <b>November 19</b> | <b>Life Cycle Cost Analysis</b><br>Kevin Hydes of Keen Engineering will cover full environmental life cycle cost analysis: the balancing of environmental, social, and economic factors while understanding and acknowledging building and system efficiency, longevity, and durability.  |
| <b>December 05</b> | <b>Data Collection for Pumps and Fans</b><br>This program covers the tools and techniques available to assess and implement energy saving retrofits on pump and fan systems for commercial and industrial buildings. The instructors will cover pump and fan fundamentals, site survey and project screening techniques, and field measurement equipment. |

### ARCHITECTURE

- |                    |  |
|--------------------|--|
| <b>November 14</b> | <b>Fundamentals of Skylighting in Non-Residential Buildings</b><br>In this program we will summarize research on the connection between daylight and productivity, provide an overview of skylighting design considerations, and direct participants to resources available to assist with skylighting design.   |
| <b>November 14</b> | <b>Advanced Skylighting Design in Non-Residential Buildings</b><br>In case studies covering office, retail, and classroom buildings, we will review and analyze the reasoning behind design decisions. We will also cover guidelines for the development of design specifications and acceptance criteria.<br>Prerequisite: Fundamentals of Skylighting program held earlier in the day. |
| <b>November 26</b> | <b>High Performance Schools (CHPS) Workshop</b><br>A diverse panel of experts will discuss daylighting design and student productivity, high performance electric lighting, optimized HVAC systems, sustainable site planning and materials, and available tools for districts and their design teams.   |

### LIGHTING

- |                    |   |
|--------------------|---|
| <b>November 12</b> | <b>Lighting Design for Architects</b><br>Lighting designer Tom Tolen, LC, will focus on fundamental lighting concepts for architects, including terminology, visual perception, surface properties, light and color theory, equipment, design criteria, and applied design. |
|--------------------|---|

MAN CAN CURE DISEASE BUT HE CANNOT CURE FATE

# DOE-2

**DOE-2.1E (v. 119) 1,000-Zone version for Windows from ESTSC; other vendors of DOE-2 based programs are listed on our website: <http://SimulationResearch.lbl.gov> > DOE-2**

Cost is as follows:

- \$ 300 U.S. Government, non-profit Educational
- \$ 575 U.S., Mexico, Canada
- \$ 1268 Japan only
- \$ 1075 All Other Non-U.S.

## **DOE-2 Documentation on a CD from ESTSC - Cost US\$100**

### ***What is included on the CD?***

- DOE-2 Reference Manual (Part 1)
- DOE-2 Reference Manual (Part 2)
- DOE-2 Supplement to the Reference Manual (2.1E)
- DOE-2 BDL Summary (2.1E)
- DOE-2 Engineers Manual (2.1A)

## **Order Software and ESTSC Documentation**

## DOE-2 Help Desk

Phone: (510) 486-5711. Fax: (510) 486-4089

Phone: (516) 453-5774; Fax: (516) 453-1555

I've got some basic questions about DX Units. Does the DX mean direct expansion system?

Yes, DX stands for direct expansion. Of course this means nothing by itself, but in general it means a small or medium sized system (up to say 400 kW) which uses the refrigerant evaporator to directly cool supply air. This would be in

contrast to a central chiller/chilled water system in which the evaporator is used to chill water which is then pumped around the system to the various cooling coils. Most often the DX units have air-cooled condensers. The typical applications are residential room (window) air conditioners or split system air-to-air heat pumps, or commercial rooftop (packaged) units, used for modest-sized commercial buildings.

What is the typical COP for that system compared to normal chiller based system, where the COP is more than 3?

DX systems tend to be less efficient than central chillers since they are often cheaply built and usually have air-cooled condensers. But the COP can definitely be above 3, maybe 3.4.

Is it possible to use free cooling with DX cooling?

These units are factory built, usually of low quality; I've never heard of free cooling from a cooling tower with these units. They usually do have an outside air economizer capability. You could certainly hand-build a DX unit with free cooling.

How can it be modeled in DOE-2?

The Packaged Variable air Volume System (PVAV) system would be the way to go.

## Adapting DOE-2 to Meet the Research Interests of the Egyptian Housing Bureau and Building Research Center

by

Joe Huang (yjhuang@lbl.gov)  
Simulation Research Group  
Building Technologies Department  
Environmental Energy Technologies Division  
Lawrence Berkeley National Laboratory

For the past two years, the author has been working with Joe Deringer of The Deringer Group in Berkeley and Prof. Moncef Krarti of the University of Colorado to provide technical assistance to the Housing Bureau of Egypt to develop building energy standards for that country (see <http://www.icbec.org/EgyptHome.htm> for details).

DOE-2 was recommended as the simulation tool. User training was provided both in Egypt and the U.S. Training was first done with a user-friendly version of DOE-2 (*VisualDOE* which has a graphical interface) and then migrated to a standard version of DOE-2.1E as the Housing Bureau staff gained more familiarity with the text-based input and output. To facilitate running parametric simulations, The Deringer Group developed a simple but effective Windows-based procedure called *doe2parm* (see <http://www.icbec.org/Egypt/Software/DOE2Parm.htm> for details).

The following two sections describe specialized applications of DOE-2 that were developed in response to the needs of the project; we hope they will be of interest to other building energy simulation professionals.

### Modeling Thermal Comfort Using the DOE-2 Program

Since many residential buildings in Egypt do not have mechanical air-conditioning, the Housing Bureau wanted to know what the indoor thermal conditions were when only natural ventilation or ceiling fans were available, and what improvements could be expected if building standards were adopted.

To evaluate indoor thermal comfort conditions, a DOE-2 Function was written to derive the Predicted Percent Dissatisfied (PPD) and Predicted Mean Vote (PMV) based on the Fanger Model. The calculations in this Function followed the derivation given in a paper by one of the team members (Holz et al. 1996). The Fanger Model, like other comfort models, requires as input the Mean Radiant Temperature (MRT) of the space. DOE-2, however, usually calculates only the indoor air temperature and not the inside surface temperatures on which the MRT is based. To address this deficiency, in 1994 Markus Koschenz, a researcher from the Swiss Bureau of Standards (EMPA), added a module to DOE-2.1E that back-calculated the inside surface temperatures and then, using these figures, calculated the Mean Radiant and Effective Temperatures. This modification was described in "Calculation of Surface Temperatures in DOE-2" in Volume 20, No. 2 (Summer 1999) of the *Building Energy Simulation User News* (follow this link to an updated version of the article: [http://simulationresearch.lbl.gov/dirsoft/un\\_articles.pdf](http://simulationresearch.lbl.gov/dirsoft/un_articles.pdf)).

One of the most problematic aspects in writing a DOE-2 Function is determining where a program variable of interest can be accessed. This problem is especially tricky when the variable, i.e., Mean Radiant Temperature, is a later addition that is calculated after the DOE-2 SYSTEM calculations for each hourly time step have been completed. Since there are no Function access points within the EMPA modifications, the only way to access the Mean Radiant and Effective Temperatures is to write them to a SYSTEMS hourly-report, and have the function loop through the HOURLY-REPORT array at the conclusion of each time step to pick up the temperatures.

Therefore, to properly run the PPMV Function shown below requires these two changes to your input:

1. The option for calculating Inside Surface Temperatures is turned on, i.e., under the BUILDING-LOCATION command, add SURF-TEMP-CALC = YES.
2. The Mean Radiant Temperature (Variable 91) and Effective Temperature (Variable 92) for each zone of interest are written to an hourly-report file. Here is a sample hourly-report input for a two-zone building:

```
HRSCH=SCHEDULE THRU DEC 31 (ALL) (1,24) VALUES=(1) ..  
RB1=REPORT-BLOCK VARIABLE-TYPE=ZONE_1 VARIABLE-LIST=(91,92) ..  
RB2=REPORT-BLOCK VARIABLE-TYPE=ZONE_2 VARIABLE-LIST=(91,92) ..  
SHR=HOURLY-REPORT REPORT-SCHEDULE=HRSCH
```

REPORT-BLOCK=(RB1,RB2) ..

Like other functions, PPMV.func should be inserted in the SYSTEMS input after the END command but before the COMPUTE SYSTEM command. If everything is set up correctly, the DOE-2 output will contain the PPD and PMV every hour for each zone, so you should be prepared for rather large output files. In addition, whenever DOE-2 is used with SURF-TEMP-CALC=YES, it generates a huge fort.15 file and a smaller fort.16 file. These should be deleted as they are temporary binary files with no further use.

If there are any questions in the use of this function, please e-mail Joe Huang at [YJHuang@lbl.gov](mailto:YJHuang@lbl.gov).

## Modeling Domes in DOE-2

The Egyptian researchers expressed the need to model domes and vaults, which are prevalent in Egyptian architecture. In response, I wrote an awk script that generates DOE-2 BDL input lines for a dome composed of A rows, each containing A\*4 quadrilateral polygons, with one flat polygon with A\*4 sides on the top, and two flat roofs surrounding the base, which I call the *skirt*. A, the dome radius and the location of the dome center are specified in a small input file read by the awk script, with one line for each polygon. The input file contains the following 5 numbers: dome radius, number of rows (A), the length of the square roof, and the X and Y coordinates for the dome center. For example, Figure 1 shows the result for a dome with a radius of 5 made up of 3 rows, flat roof with a length of 15, and located at the origin (X=0, Y=0). Figure 2 shows a more detailed model of the same dome, but now made up of 7 rows.

The proper syntax to generate the DOE-2 input file lines is

```
awk -f dome.awk dome.dat > dome.bdl
```

where dome.awk is the awk file, dome.dat is the short input file, and dome.bdl is the output BDL file. Both drawings were made running the BDL files through *DrawBDL 3.0*.

Figure 1

Figure 2

Listing for dome.awk -----

```
#
# this awk script generates DOE-2 BDL input for a dome composed of "arcs" x "rows" of quadrilateral polygons and one polygon with "arcs" sides on the
# top. Syntax is awk -f dome.awk dome.dat > dome.bdl where dome.dat is a file with 1 line per dome, each line containing 4 numbers for the dome radius,
# number of rows (integer) for dome, the length of the square roof, and the X Y coordinates at the dome center -- Joe Huang 22 July 02

## DrawBDL 3.0: New and Improved!

Joe Huang and Associates is pleased to announce Version 3.0 of the *DrawBDL* program for viewing the building geometry in DOE-2 input and output files. We have completely rewritten *DrawBDL* using C++ to run in a native 32 bit environment such as Windows 95/2000/NT. In addition to having a somewhat different look and feel, Version 3.0 has the following improvements:

1. New user interface with a hierarchical tree showing all building surfaces.
2. No limit on the number of building surfaces, except for the amount of memory available on the computer.
3. For building surfaces, the expanded data window shows not only the input values, but also their locations in the global coordinate system; for spaces, the data window shows the gross and net areas of walls, windows, doors, roofs, and skylights.
4. Displays surfaces input as two-dimensional or three-dimensional polygons (please see DOE-2.1E Documentation Update #2 [http://SimulationResearch.lbl.gov/dirsoft/21e\\_update2.pdf](http://SimulationResearch.lbl.gov/dirsoft/21e_update2.pdf) for the syntax to input surfaces as polygons).
5. Changing the sort order of building surfaces used in the display; this allows users to "touch up" the shaded drawings for use in presentations.
6. Output the surface data in *EnergyPlus* \*.idf format. This is helpful for *DrawBDL* users who wish to convert their DOE-2 input files into *EnergyPlus* input files. Since *DrawBDL* reads and stores only building surface data, the converted *EnergyPlus* file is a partial file containing only the inputs for building surfaces.

*DrawBDL 3.0*

The price for *DrawBDL 3.0* is \$125 plus shipping. For more information or to order, please contact

## FREE Membership in 2002!!!

### International Building Performance Simulation Association USA Affiliate

The IBPSA-USA Board of Directors has waived the annual membership fee for 2002 so joining our organization is easier than ever. If you want to become a member, send an email with your name, company, mailing and email address, and phone and fax numbers to Rick Strand ([r-strand@uiuc.edu](mailto:r-strand@uiuc.edu)). You will receive a confirmation email to indicate that you have been accepted for membership.

[www.ibpsa.org](http://www.ibpsa.org)

## EnergyPlus Weather Data

The EnergyPlus development team is pleased to announce that our web site now offers more than 570 weather locations available for download and ready to use with EnergyPlus. There are 275 locations in the United States, 16 California thermal zones, 55 Canadian locations, and 233 international locations in more than 80 countries.

Go to [www.energyplus.gov](http://www.energyplus.gov)

On the right side, under Weather Data, click on one of the following links:  
USA, California, Canada or International.

We recommend that you also download the weather utility RPT file for each location. The RPT file includes design data where available, statistics for the weather file, including typical and extreme periods (hottest summer week, coldest winter week, typical spring week, etc), Koppen climate classification, heating and cooling degree days, monthly average minimum and maximum dry bulb and dew point temperatures, undisturbed ground temperatures, direct and diffuse solar radiation, relative humidity, and wind speed and direction.

# GenOpt 1.1.2

## Generic Optimization Program

**GenOpt** is a multi-parameter optimization program; it automatically finds the values of user-selected design parameters that minimize a cost function, such as annual energy use, calculated by an external simulation program like EnergyPlus, SPARK, DOE-2, BLAST, TRACE, TRNSYS, etc.

**GenOpt** can be used with any simulation program that has text-based input and output. It also offers an interface for adding custom optimization algorithms to its library.

### Release of GenOpt 1.1.2

**GenOpt 1.1.2** fixes problems in reading simulation output files where the objective function value is followed by a comma. Such output strings can be found, for example, in some EnergyPlus outputs.

Also, a method called 'postProcessObjectiveFunction(int, double[] f)' has been added to the file named 'Optimizer.java'. You can modify this function to easily implement post-processing of the objective function value, such as adding two outputs to seek the minimum of the sum of the two outputs.

Example files have been added to the **GenOpt** web page (<http://SimulationResearch.lbl.gov> > GenOpt) to help users set up the program to optimize EnergyPlus simulations. **GenOpt** input files still have the same syntax as in version 1.1.1. Therefore, your **GenOpt** input files are compatible with the new version.

**GenOpt 1.1.2** (with user manual) may be downloaded free of charge from  
<http://SimulationResearch.lbl.gov> > GenOpt

## Building Design Advisor 3.0

*Decision making through the  
integrated use of multiple  
simulation tools and  
databases*

The **Building Design Advisor (BDA)** is a Windows® program that addresses the needs of building decision-makers from the initial, schematic phases of building design through the detailed specification of building components and systems. The BDA is built around an object-oriented representation of the building and its context, which is mapped onto the corresponding representations of multiple tools and databases. It then acts as a **data manager** and **process controller**, automatically preparing input to simulation tools and integrating their output in ways that support multi-criterion decision-making. BDA 3.0 includes links to **SGE** (a graphical editor for schematic design), **Delight** (a daylighting simulation tool), **ECM** (a simplified electric lighting simulation tool) and the **DOE-2.1E** building energy simulation program.

**ECM**, an **electric lighting simulation tool**, is integrated through BDA with DOE-2. BDA's Schematic Graphic Editor (**SGE**) allows placement of electric lighting luminaires and specification of reference points for daylight-based electric lighting controls. Moreover, BDA has the capability of **running DOE-2 parametrically** to generate a plot that shows the relationship between effective aperture and energy requirements. There is also the added functionality of working with either **English units or Metric units**.

Current development efforts are focused on the completion of BDA 3.1, which includes computation of operating energy costs. To download a free copy of BDA 3.0, go to

<http://gaia.lbl.gov/BDA/index.html>

The BDA source code is available for licensing; if interested, please contact Dr. Papamichael at [K\\_Papamichael@lbl.gov](mailto:K_Papamichael@lbl.gov).

For Beta Testing of BDA 3.1, contact Kosta Papamichael at [k\\_papamichael@lbl.gov](mailto:k_papamichael@lbl.gov).

### JOIN THE BLDG-SIM MAILING LIST

BLDG-SIM is a mailing list for users of building energy simulation programs like EnergyPlus, DOE-2, Trace-600, HAP, BLAST, ESP, SERIRES, TRNSYS, TASE, ENERGY-10 and others.

Because building simulation professionals are located worldwide, the BLDG-SIM list is an attempt to foster the development of a community of those users. Users of all levels of expertise are welcome and are encouraged to share their questions and insights about these programs.

The web page for BLDG-SIM is <http://www.gard.com/bldg-sim.htm>

Jason Glazer, P.E., Of GARD Analytics, Inc. Is the list administrator ([jglazer@gard.com](mailto:jglazer@gard.com)).

You are invited to test **DoeRayMe**, a new DOE-2.1E screening tool application currently being developed by Jason Glazer, P. E., of GARD Analytics, Inc. **DoeRayMe** is a simple and flexible interface that uses a specially developed DOE-2 input file (template) that contains special codes describing the parameters available to be changed in the user interface. This allows new screening tools to be developed by any DOE-2 user. Please visit the **DoeRayMe** web site at <http://www.gard.com/DoeRayMe>.

## ENERGY-10, VERSION 1.5

**ENERGY-10** is a design tool for smaller residential or commercial buildings that are less than 10,000 ft<sup>2</sup> or buildings that can be treated as 1- or 2-zone increments. It performs whole-building energy analysis for 8760 hours/year, including dynamic thermal and daylighting calculations. **ENERGY-10** was specifically designed to facilitate the evaluation of energy-efficient building features in the very early stages of the design process.

### Version 1.5 Upgrades

#### Life Cycle Costs

A whole new capability is included to evaluate life-cycle costs. The year-by-year cash flow of the building is determined and discounted to the present value. The difference between Bldg-1 and Bldg-2 is determined in terms of net present value, NPV (the difference in life-cycle costs), internal rate of return, benefit-to cost ratio, or simple payback.

#### Up-to-date compiler

The entire program has been ported to 32-bit and (with the exception of the CNE thermal simulation engine) programmed in Visual C++ 6.0, the current Microsoft compiler. One benefit that users will appreciate is that it is no longer necessary to close **ENERGY-10** before starting a new project.

#### More Wall Layers

In previous versions, you were restricted to 6 layers in a wall construction. This has now been expanded by 3, giving you the opportunity to define a 7-layer wall plus two air films.

#### New Graphs

Graphs are programmed in a new and powerful graphing package (Olectra).

#### New Reports

A Cost Summary report tabulates the results of the life cycle cost evaluation. An HVAC and EES Cost report details the components of HVAC cost and each of the EES costs. A Peak Loads report identifies the peak loads and corresponding HVAC rated capacities for the AutoSize calculations and also the peak loads and consumptions during the annual simulation showing when the peaks occurred.

## Meetings, Conferences, Symposia

### 2002

December 4-6 2002	Advances in Building Technology		To be held in Hong Kong Contact: clyystui@polyu.edu.hk <a href="http://www.polyu.edu.hk/~fclu/ABT21002">http://www.polyu.edu.hk/~fclu/ABT21002</a>
-------------------	---------------------------------	---	--

December 16-18 2002	6 <sup>th</sup> International Conference on System Simulation in Buildings		To be held in Liege, Belgium Contact: michele.deprez@ulg.ac.be <a href="http://www.ulg.ac.be/labothap">http://www.ulg.ac.be/labothap</a>
---------------------	--	--	--

### 2003

January 25-29 2003	ASHRAE Winter Meeting		To be held in Chicago, IL Contact: jyoung@ashrae.org <a href="http://www.ashrae.org">http://www.ashrae.org</a>
--------------------	-----------------------	---	--

May 20-22 2003	11 <sup>th</sup> National Conference on Building Commissioning		To be held in Palm Springs, CA <a href="http://www.peci.org/ncbc">http://www.peci.org/ncbc</a>
----------------	--	---	---

June 28-July 2 2003	ASHRAE Annual Meeting		To be held in Kansas City, MO Contact: jyoung@ashrae.org <a href="http://www.ashrae.org">http://www.ashrae.org</a>
---------------------	-----------------------	--	--

August 11-14 2003	IBPSA Building Simulation 2003		To be held in Eindhoven, the Netherlands <a href="http://www.ibpsa.org">http://www.ibpsa.org</a>
-------------------	--------------------------------	--	---

## Directory of Software and Services for EnergyPlus

Program Name	Description	Cost
EnergyPlus 1.0.2	Downloadable from <b><a href="http://www.energyplus.gov">www.energyplus.gov</a></b>  <u>Support</u> <a href="mailto:EnergyPlus-Support@gard.com">EnergyPlus-Support@gard.com</a>  <u>Support Group</u> <a href="http://groups.yahoo.com/group/EnergyPlus_Support">groups.yahoo.com/group/EnergyPlus_Support</a>	Free

## Support Tools for EnergyPlus

Program Name	Description	Cost
<b>EnergyPlus Interface Support Tools</b>  <b>The Deringer Group, Inc.</b> 1349 Addison Street Berkeley, CA 94702 Tel: (510) 843-9000 Fax: (510) 843-9005 <a href="http://www.deringergroup.com">www.deringergroup.com</a>	<b>EnergyPlus Online Simulations</b> – online and embedded in the EcoAdvisor set of online training modules on sustainable buildings. These tools can be used by anyone and require no special knowledge of EnergyPlus.  <b><u>EnergyPlus Interface Support Tools</u></b> <b>EzPlus-Parm</b> is a standalone Windows tool intended primarily for EnergyPlus parametric analysis. It was designed to simplify the running of multiple parametric EnergyPlus simulations and helps a user organize and edit files. <b>DrawEzPlus</b> is a 3-D geometry rendering tool that displays the 3-D geometry imbedded in an EnergyPlus file.	Free

## Directory of Software and Services for DOE-2

### ESTSC Versions of DOE-2

Program Name	Description	Cost
<b>DOE-2.1E (Ed Kidd or Walt Kelly)</b> <a href="mailto:estsc@adonis.osti.gov">estsc@adonis.osti.gov</a> <b>ESTSC</b> P.O. Box 1020 Oak Ridge, TN 37831-1020 Ph: 865-576-2606 / Fx: 576-2865 <a href="http://www.osti.gov/estsc">www.osti.gov/estsc</a>	Source code, executable code and complete current documentation for:  DOE-2.1E/Version 117 1000-zone version  <b>OS:</b> Windows, SUN UNIX	<b>Support</b> Limited operational support (telephone assistance for installation, media or platform questions).  <b>Windows</b> U.S. Govt/Non-Profit/Educ      \$ 300 U.S. Public, Mexico, Canada      \$ 575 Japan      \$1268 Other Foreign      \$1075

### Commercial Versions of DOE-2

Program Name	Description	Cost
<b>ADM-DOE-2 (Richard Burkhart)</b> ADM Associates 3239 Ramos Circle Sacramento, CA 95827-2501 Ph: 916-363-8383, Fx: 363-1788 <a href="http://www.adm-energy.com">www.adm-energy.com</a>	Use on 386/486 PCs with a math co-processor and 4MB of RAM. The package contains everything needed to run the program: program files, utilities, sample input files, and weather files. More than 300 weather files available. <b>OS:</b> DOS, Windows 95	<b>Input</b> ----- <b>Output</b> ----- <b>Support</b> ----- \$395 + \$15/SH including one set weather data (your choice) and documentation
<b>Compare-IT (Matt Brost)</b> RLW Analytics, Inc. <a href="mailto:info@rlw.com">info@rlw.com</a> 1055 Broadway, Suite G Sonoma, CA 95476 Ph: 707-939-8823, Fx: 939-9218 <a href="http://www.rlw.com">www.rlw.com</a>	Compare-IT allows DOE-2 professionals to add value to their projects by giving clients "what-if" scenarios using DOE-2. The interface is designed for novice energy analysts and the GUI can be customized for each client's particular interests. Based DOE-2.1E. <b>OS:</b> DOS, Windows (98, 95, NT)	<b>Input:</b> Customizable windows GUI dynamically built based on DOE-2 macros. ----- <b>Output</b> <b>Support</b> ----- \$500 consultant \$2000 client  Documentation available
<b>DOE-Plus (Steve Byrne)</b> Item Systems <a href="mailto:byrne@item.com">byrne@item.com</a> 321 High School Road NE Box 344 Bainbridge Island, WA 98110 Ph: 206-855-9540 / Fx: 855-9541 <a href="http://www.item.com/doeplus.htm">http://www.item.com/doeplus.htm</a>	Complete support for all DOE-2 commands. Utility programs included: Prep, Demand Analyzer, weather processor. Over 500 worldwide weather files. Imports BDL files created with a text editor or other program. Based on DOE-2.1E. <b>OS:</b> DOS, Windows (3.1, 95, NT)	<b>Input</b> Interactive, graphical, fill-in-the-blanks ----- <b>Output</b> Customizable tables and graphics ----- \$895 with DOE-2 and doc \$495 without DOE-2 Source code not available.

Note: We list third-party DOE-2-related products and services for the convenience of program users, with the understanding that the Simulation Research Group does not have the resources to check the DOE-2 program adaptations and utilities for accuracy or reliability.

### Commercial Versions of DOE-2 (continued)

Program Name	Description	Cost
<b>EnergyPro 3.0 (D. Vonderkullen)</b> demian@energysoft.com  Gabel Dodd/EnergySoft LLC 100 Galli Drive #1 Novato, CA 94949-5657 Ph: 415-883-5900, Fx: 883-5970 www.energysoft.com	Performs nonresidential load calculations for HVAC equipment sizing. Electronically exports forms to AutoCad for inclusion on blueprints. On-line help. 344 weather files for the U.S. and Canada. <b>OS:</b> DOS, Windows (95, NT). <b>For California Users:</b> Performs Title 24 compliance calculations, includes state-certified HVAC and DHW Equipment directories, Title 24 tailored lighting calculations. Based on ESTSC DOE-2.1E	<u>Input:</u> Graphical  <u>Output:</u> Graphs, forms  <u>Support:</u> Unlimited support  DOE-2 Module: Non-residential \$ 700 <sup>1,2</sup> Residential \$ 250 <sup>1,2</sup> Program Interface \$ 195 <sup>3</sup> <sup>1</sup> price reflects cash discount <sup>2</sup> includes documentation <sup>3</sup> required
<b>EZDOE (Bill Smith)</b> bsmith @ elitesoft.com Elite Software P.O. Box 1194 Bryan, TX 77806 Ph: 409-846-2340 / Fx: 846-4367 http://www.elitesoft.com/web/hvacr/ elite_ezdoe_info.html	Provides full screen, fill-in-the-blank data entry, dynamic error checking, context-sensitive help, mouse support, graphic reports, a 750-page user manual, and extensive weather data. Full implementation of DOE-2 on DOS-based 386 and higher computers. On-line help. Some weather files. Based on DOE-2.1E. <b>OS:</b> DOS	<u>Input:</u> Fill-in-the-blanks  <u>Output:</u> Standard DOE reports plus some custom graphic reports  <u>Support:</u> Unlimited phone support  \$1295 w/documentation  Source code not available.
<b>FTI/DOE2 (Scott Henderson)</b> info @ finite-tech.com Finite Technologies Inc. 3763 Image Drive Anchorage, Alaska 99504 Ph: 907-333-8937, Fx: 333-4482 http://www.finite-tech.com/ FTIDOE2001.htm	Version 3.0 Release -- FTI/DOE is 100% compatible with LBNL version. Source code versions will compile with most F77-compliant compilers. On-line help: 344 weather files for the U.S. and Canada. Based on ESTSC DOE-2.1E. No demo, 30-day trial period <b>OS:</b> DOS, Windows (3.x, 95, NT) AIX, ULTRIX, VMS, Linux, NeXTStep,	<u>Input:</u> Version 2.x: text based Version 3.x: graphical <u>Output:</u> All standard DOE-2 reports Run time and status graphics <u>Support:</u> 90-days free; then cost is \$ 35 each email per incident \$ 55 per hour per incident \$125 per hour for engineering advice.  \$ 995.99 US w/documentation \$1066 Int'l w/documentation \$4999.99 Source code
<b>PRC-DOE-2 (Paul Reeves)</b> Paul.Reeves@DOE2.com Partnership for Resource Conservation 140 South 34 <sup>th</sup> Street Boulder, CO 80303 Ph: 303-499-8611, Fx: 554-1370	Text-based version of DOE-2 includes documentation. Extensive information on new features, including information on new system types, new commands, new options, etc., added to later versions of 2.1E.  <b>OS:</b> DOS, Windows (95, NT)	<u>Input:</u> Standard text-based  <u>Output:</u>  <u>Support:</u> Unlimited support.  \$ 495 w/documentation  Source code not available.
<b>VisualDOE 3.0 (Eric Kolderup)</b> Charles Eley Associates 142 Minna Street (2 <sup>nd</sup> floor) San Francisco, CA 94105 Ph: 415-957-1977 - Fax 1381 www.eley.com, support@eley.com	Fast construction of building geometry with pre-defined blocks and drawing interface. Import zone shapes from CADD file (dxf). Point+click to define zone properties and HVAC systems. Dynamic 3-D model views. Online help. LiveUpdate through internet. 400+ US, foreign weather files. <b>OS:</b> Windows 95/98/NT/ME/2000/XP	<u>Input:</u> Graphical <u>Output:</u> Graphical  \$800 new commercial license \$400 commercial upgrade from version 2.6 60% discount for educational use \$3000 Site license (up to 8 registration keys) \$8000 corporate license (up to 15 registration keys) <u>Support:</u> 90 days free phone plus 1 year email support.; thereafter \$300/year per licensed user

## Support Tools for DOE-2

Program Name	Description	Cost
<b>DOE-2 Parametric Study Tool</b> <b>The Deringer Group, Inc.</b> 1349 Addison Street Berkeley, CA 94702 Ph: (510) 843-9000, Fx: -9005 <a href="http://www.deringergroup.com">www.deringergroup.com</a>	<b>DOE2PARM</b> – is an MS Windows-based tool that permits you to run, edit and link all the related input and output files together in the same window.	<i>Free!</i>
<b>DrawBDL 3.0</b> <b>Joe Huang &amp; Associates</b> 31 Sarah Lane Moraga CA 94553 Ph: 925-247-9180	<b>DrawBDL</b> , Version 2.1, is a <b>graphic debugging and drawing tool for DOE-2 building geometry</b> . DrawBDL reads your BDL input and makes a rotate-able 3-D drawing of your building with walls, windows, and building shades shown in different colors for easy identification. <b>OS:</b> DOS, Windows (3.1, 95, 98, NT) [Works with 2.1E] email: <a href="mailto:tmchow@compuserve.com">tmchow@compuserve.com</a>	\$125.00 plus shipping
<b>PRC-TOOLS</b> (Paul Reeves) <b>P R C</b> 140 South 34 <sup>th</sup> Street Boulder, CO 80303 Ph: 303-499-8611 / Fx: 554-1370	<i>PRC-Tools</i> aid in <b>extracting, analyzing, and formatting DOE-2 output</b> . <i>PRC-Grab</i> automates the process of extracting any number of answers from DOE-2 standard output files. <i>PRC-Hour</i> and <i>PRC-Peak</i> format the hourly output and create Peak-Day and Average-Day load shapes for any number of periods and for any combination of hourly values. <b>OS:</b> Windows (95, 98, NT) [Works with 2.1E]	\$99.00
<b>RIUSKA</b> (Tuomas Laine) <b>Olof Granlund Oy</b> P O Box 59 Helsinki, FIN-00701 Finland ( <a href="mailto:tuomas.laine@granlund.fi">tuomas.laine@granlund.fi</a> ) Ph: +358 (9) 351031 / Fx: 35103421	With RIUSKA user can add building envelope materials, internal loads and HVAC-system into the created 3D-model of the building and perform thermal calculations. RIUSKA can be used for space simulations to dimension cooling or heating equipments, or for energy calculations of the whole building. <b>OS:</b> Windows (95, 98, NT) [Works with 2.1E]	Contact Tuomas Laine for pricing.
<b>Visualize-IT</b> (Matt Brost) <b>RLW Analytics, Inc.</b> <a href="mailto:mattb@rlw.com">mattb@rlw.com</a> 1055 Broadway, Suite G Sonoma, CA 95476 Ph: 800-472-6716 Fx: 707-939-8823 <a href="http://www.rlw.com/visualize_it.html">www.rlw.com/visualize_it.html</a>	Visualize-IT 2.0 is a Windows application designed to help you explore and summarize short-interval time series data, e.g., measurements taken once every 15 minutes over a period of weeks, months or years. Visualize-IT has been developed specifically for electric and gas load data measuring class profiles, market-segments, individual customer sites or specific end uses. Customized DOE2.1e hourly output importer. Visualize-IT is highly useful and informative for looking at DOE2 output and/or comparing to interval metered data. It is equally useful for other time series measurements such as weather, industrial process control, and water quality. <b>OS:</b> Windows 95, 98 and NT	\$500.00 per set Volume Discounts Available

## Special Versions of DOE-2

Program Name	Description	Cost
<b>CBIP</b> <a href="http://cbip.nrcan.gc.ca/cbip.htm">cbip.nrcan.gc.ca/cbip.htm</a> Office of Energy Efficiency Natural Resources Canada 580 Booth St., 18th Floor Ottawa ON K1A 0E4, CANADA	Natural Resources Canada's <b>Commercial Building Incentive Program (CBIP)</b> offers a financial incentive for the incorporation of energy efficiency features in new commercial and institutional building designs. The objective of this new incentive is to encourage energy-efficient design practices and to bring about lasting changes in the Canadian building design and construction industry. The program will be offered until March 31, 2004.	Web Based (free)
<b>Cool Tools</b> (Peter Turnbull) Pacific Gas & Electric Company <a href="mailto:pwt1@pge.com">pwt1@pge.com</a> <a href="http://www.hvacexchange.com/cooltools/">www.hvacexchange.com/cooltools/</a>	The CoolTools™ project objective is to develop, disseminate and promote an integrated set of tools for design and operation of chilled water plants. CoolTools products are Internet based, public domain resources available to building owners, design professionals, and operators involved in both new construction and retrofits.	Web Based (free)
<b>DesiCalc GRI-98/0127</b> <a href="http://www.desicalc.com">www.desicalc.com</a>	<b>DesiCalc screens desiccant cooling applications.</b> It estimates annual or monthly energy loads, using hour-by-hour simulations, and costs for 11 typical commercial buildings in 236 geographical locations in the US. Includes the latest TMY2 meteorological database [Based on DOE-2.1E] <b>OS:</b> Windows 3.1, 95, 98, NT	\$295 w/doc +8.75% tax in IL +4.5% tax in VA S/H add \$20
<b>Energy Gauge USA (Danny Parker)</b> Florida Solar Energy Center 1679 Clearlake Road Cocoa, FL 32922 <a href="http://energygauge.com">energygauge.com</a>	<b>Energy Gauge USA</b> allows the simple <b>calculation and rating of residential building energy use</b> in the US. The simulation calculates a six-zone model of the residence (conditioned zone, attic, crawlspace, basement, garage and sunspace) with the various buffered spaces linked to the interior as appropriate. TMY weather data for the program are available for 239 US locations. [Based on DOE-2.1E] <b>OS:</b> Windows 95, 98, NT	Contact Danny Parker at FSEC for availability.
<b>Home Energy Saver</b> (Residential DOE-2) <a href="http://hes.lbl.gov">hes.lbl.gov</a>	<b>Calculation of residential energy consumption using DOE-2.1E.</b> The program performs a full annual simulation for a typical weather year (involving 8760 hourly calculations) from 239 locations around the United States in about 10-20 seconds.	Web Based (free)
<b>PERFORM 2001</b> California Energy Commission 1516-9 <sup>th</sup> St., MS-13 Sacramento, CA 95814 Ph: 916-654-5385	Created for the State of <b>California</b> Energy Commission's, <b>Title 24 energy code</b> . Perform 2001 is an interface shell with DOE-2 as the engine. PERFORM 2001 calculates building energy consumption for space heating, space cooling and domestic hot water heating, and compares the energy consumption of the building design against the requirements of the standards. DOS input. Output is only California Title 24 compliant. [Based on DOE-2.1E] Technical support \$100/year from Gabel-Dodd Energy Soft LLC, Call 415-883-5900 for details.	\$250 including PERFORM 2001 program and manual on CD. (VISA/MC) Order #PS-400-04-017 <a href="http://www.energy.ca.gov/reports/reports_400.html">www.energy.ca.gov/reports/ reports_400.html</a>
<b>RESFEN-3.1</b> Building Technologies, MS 90-3111 Lawrence Berkeley Laboratory Berkeley, CA 94720	<b>RESFEN</b> calculates the <b>energy and cost implications of a building's windows compared to insulated walls</b> . The relative energy and cost impacts of two different windows can also be compared against each other. RESFEN calculates the heating and cooling energy use and associated costs, also the peak heating and cooling demand for specific window products. [Based on DOE-2.1E] <b>OS:</b> Windows 95, 98, NT	Free! Download from <a href="http://windows.lbl.gov/software/resfen">windows.lbl.gov/software/ resfen</a>

## INTERNATIONAL DOE-2 RESOURCE CENTERS

*The people listed here have agreed to be primary contacts for DOE-2 program users in their respective countries. Each resource center has the latest program documentation, all back issues of the User News, and recent LBNL reports pertaining to DOE-2. Users may make arrangements to photocopy the new material for a nominal cost. We hope to establish centers in other countries; please contact us if you want to establish a center in your area.*

### Australia and Australasia

## Support Tools for EnergyPlus and DOE-2 from The Deringer Group

### EzPlus-Parm

This is a standalone Windows tool intended for EnergyPlus parametric analysis. It was designed to simplify the running of multiple parametric EnergyPlus simulations by helping a user organize and edit all needed files.

### Draw EzPlus

A tool that displays the 3-D geometry embedded in an EnergyPlus file. The user can toggle between line and surface (fill) presetation modes, and can select to draw any mix of key building objects – floor, walls, roof, windows, and attached and detached shading.

### EnergyPlus Online Simulations

One set of tools is online and embedded in the [EcoAdvisor](#), a set of online training modules for sustainable buildings. These tools can be used by anyone and require no special knowledge of EnergyPlus.

### EnergyPlus Interface Support Tools

This is a set of stand-alone Windows-based tools intended to make the text-based use of EnergyPlus faster, easier, and more accurate.

### DOE-2 Parametric Study Tool -- DOE2Parm

DOE-2 parametric analysis can be complicated because you need to link, run and edit multiple files that can be located anywhere on your computer. DOE2Parm allows you to run the parametric analysis in the same window. DOE2Parm is an MS Windows-based tool.

***Founded in 1980, The Deringer Group (TDG) specializes in sustainable and energy efficient building design projects and studies throughout the world. TDG is developing several support tools for EnergyPlus, all of which may be freely downloaded.***
